CHAPTER 4 — URBAN MEDIA FOR EMPOWERING CITIZENS

Measuring Amsterdam: A participatory mapping tool for citizen empowerment

Maarten Groen, Wouter Meys

Bianca Herlo, Florian Sametinger, Jennifer Schubert, Andreas Unteidig

Empowering science parks for disabled persons using Boxes

Lucas H. M. Lazaro, Enlai L. Cheng, Lucas N. Couceiro, Lucia V. L. Filgueiras, James Ohene-Djan

Empowering Citizens and their Input on Civic Issues through Urban Media

Ian McArthur, Martin Tomitsch, Luke Hespanhol

Dynamic Street Light Management: Towards a citizen centred approach

Nabil Ouerhani, Nuria Pazos, Marco Aeberli, Julien Senn, Stéphane Gobron

Transforming a City into a Sociable Smart City

Dimitrios Ringas, Eleni Christopoulou

CHAPTER 5 — DESIGNING THE HYBRID CITY

The Image of The City in The Information Era: Analyzing the effect of digital mobile devices on city imaging process

Negar Ahmadpoormobarakeh, Tim Heath

Lessons from Game Design: Understanding Participatory Processes through Game Mechanics

Cristina Ampatzidou, Katharina Gugerell, Jeremiah Diephuis

The urban myths of open data

Christian Ulrik Andersen

Asger Jorn’s Bean Machine: An artistic critique of Functionalism and its implications for today’s Smart Cities

Christopher Collier

Understanding Discursive Design and Social Data in Architectural Processes

Kjeld S. Hansen, Tor-Morten Gronli, Synne Skjulstad, Vesna Kontere McQuillan

The Space of Engagement: Participatory design through serious urban gaming – the case of euREKA digital simulation game

Milena Ivković, Milica Anđelković

Street-level City Analytics: Mapping the Amsterdam Knowledge Mile

Sabine Niederer, Gabriele Colombo, Michele Mauri, Matteo Azzi

CHAPTER 6 — ENVIRONMENTAL SENSING AND HYBRID OBJECTS

The Hybrid Object: augmenting objects and transforming their relationship with humans

Dimitris Charitos, Maria Kerasia Andrikaki

HexSpace: Technological Layering of Domestic Environments

Stavros Didakis

Sensing the Workspace: An Innovative Way to Improve Eco-Awareness at Work

Anna Karagianni, Panagiotis Parthenios

Identification of Things in a Smart City

Stella Simitropoulou, George Charamis, Achilles Kameas

CHAPTER 7 — URBAN DATA VISUALIZATION AND MAPPING

Mapito.org: Open Geographic Platform for Locative Media Apps

Konstantinos Chorianopoulos, Konstantinos Pardalis
Business Intelligence for Primary Healthcare Management: The case of PEDY Network in Athens Metro Area
Dimitris Drakopoulos, Dr Annie Tubadji, Amalia Maria Koutsogianni, Stelios Dontas

Exploring Urban Mobility and Accessibility through Transport Data: A study of London Oyster card data and disability
Gareth Simons, Andrew Hudson Smith, Martin Zaltz Austwick, Katerina Skroumpelou, Stylianos Tsaparas, Gianfranco Gliozzo

The role of Electroencephalography (EEG) in Understanding the Differences in Urban-Environmental Perceptions
Katerina Skroumpelou, Panagiotis Mavros, Dr. Andrew Hudson Smith

CHAPTER 8 — AUGMENTED [URBAN] SPATIAL EXPERIENCES
“Ghost - Athens”: A mobile application about the unknown buildings and street art of Athens
Stavroula Bampatza, Angela Antoniou, George Lepouras, Violeta Bampatzia, Athena Lountzi

The Lure of CyberPark: Synergistic Outdoor Interactions between Public Spaces, Users and Locative Technologies
Konstantinos Ioannidis, Carlos Smaniotto Costa, Ina Suklje-Erjavec, Marluci Menezes, Alfonso Bahillo-Martinez

The Palimpsest Project: postalphabetical augmented museum of participatory storytelling
Polyceni Mantzou, Angeliki Matami, Georgios Kapraras, Christina Charistou

Enriching the city environment with mobile Augmented Reality edutainment applications for residents and tourists: The case of “Roads of Rhodes” game
Dimitrios Markouzis, Georgios Fessakis

Designing for Mixed Embodied Presence in a Virtual Setting
Chrissa Papasaranantou, Charalampos Rizopoulos

Hackable Urban Experiences
Marinela Telo, Konstantinos-Alketas Oungrinis

CHAPTER 9 — AUDIOVISUAL NARRATIVES IN THE CITYSCAPE
Readable City Soundscapes: reading visual noise in the hybrid city
Katerina Antonaki, Eleni Glinou, Irene Mavrommati, George Birbilis

Media Walks: Culture, Media and Design
Nikos Bubaris

Two Worlds: A Hybrid Local-Remote Interactive Sound Installation
Yiannis Colakides, Iannis Zannos, Yiannis Christides

Hello Citizen! Registering the sound of the smart city
Teresa Dillon

Locative media soundwalks: A rhizomatic approach to urban public space sound art
Dana Papachristou

ICTs and Contemporary Art: a platform for the urban well-being
Anastasia Zoi Souliotou

Walking-with-Sound: wellbeing, citizen empowerment and agency through mobile sound art
Katerina Talianni

CHAPTER 10 — PLACEMAKING IN THE HYBRID URBAN CONTEXT
Dourgouti Island Hotel: An “UrbanDig for Neighborhoods” Case Study
Christos Ananiadis, Dikaia Chatziefstathiou, George Sachinis

The ‘street’, the ‘body’ and the ‘move’: A hybrid space design for knowledge urban circulation
Anna Chronaki

m.georgalou@gmail.com

Abstract. There is more to place on the social network site of Facebook than its software configurations that allow seamless location sharing and tracking. Users do much more complex linguistic and multimodal work to give meaning to specific places foregrounding them as geographical but also as social, political, cultural, and emotional entities. This paper draws on insights from discourse analysis, sociolinguistics, semiotics, and online ethnography to explore the ways in which two Greek female Facebook participants talk about and represent places in their postings. The analysis shows that, by means of the place, the users communicate something about themselves: they confirm belonging, they communicate respect to other cultures, they use different languages to affiliate with certain places, they make political statements, they disidentify with the stressful aspects of a place in crisis, and they raise awareness about local and national issues.

Keywords: place identity; social media; Facebook; discourse analysis, semiotics; online ethnography

I. FACEBOOK AND MULTIPLY-PLACED IDENTITIES

Who we are is entwined with where we are, where we have been, or where we are going [2]. Web technologies have marked a fundamental shift in the ways we perceive and experience place. In the social media ecosystem of Facebook, the practice of writing and uploading other multimedia material is a self-reflexive process which is not situated in a particular location; it can exist anywhere, allowing the en route construction of a hybrid place identity as mobile, shifting. Consider the case of my research informant, Helen, who experiences a triple spatial reality: She lives and works in Athens; she has stayed for seven years in the UK while she has been serving as a visiting English for Academic Purposes tutor in British universities for two months per year since 2010; her partner is Hungarian and lives in Budapest. While observing her profile, I noticed that in several instances it was difficult for me to decipher in which of the three places (UK, Greece, Hungary) she was located at the time of posting on Facebook. During 2011, the bulk of Helen’s posts were related to the Greek crisis. Hence, one of my very first questions in my interview with Helen dealt with her location while posting. She stated that:

i was here most of the time but some posts were made when I was in Hungary and if I wrote some posts in September then I was in England but mainly I was here and I participated in what was happening hm.. even if I’m not in Greece I write posts on issues related to the situation here moreover, on the other hand, when I’m in Greece I write posts that concern the UK for example, when the fees increased in UK universities i was in Greece and I was very worried about this issue, as far as I can remember from my profile or other issues related to UK universities but when the big demonstrations were held and I wrote some [status] updates I was here I also posted some photos I shot them the day after the demonstrations [...] sometimes I write posts that concern Hungary even if I’m not there oh, this identity is too complicated.. a mess!

Helen acknowledges the complication of her place identity by jokingly characterising it ‘a mess’. Having Greeceii as the location of her immediate proximity (here), her place posts revolve around the three countries: Greece, UK and Hungary. Helen feels entitled to comment on her Facebook on issues about the Greek crisis wherever she is, because she still has a legitimate interest in Greece when she is in the UK. Time and again, in these posts, she draws on English language resources as illustrated in Fig. 1. But she also has a special entitlement to speak from experience on these matters: when she is in Greece, she takes part in demonstrations and then uploads relevant material on Facebook, as we will see later on.

With posts like this in Fig. 1, Helen navigates multiple places simultaneously: the one she is physically located in, the one she is thinking of as well as Facebook space itself. Facebook is brought into the places Helen occupies, and, likewise, those places are brought into Facebook. This ability to navigate multiple places at the

ii I interviewed Helen via instant messaging. We were both located in Athens at the time of the interview (29 October 2011).

---

i The interviews were originally conducted in Greek.
same time is in effect ‘the ability to consolidate and locate the spaces and information that we associate with our “digital selves” into something of a hybrid space’ [14]. In these hybrid spaces, the borders between remote and contiguous contexts, be that Greek, English or Hungarian, can no longer be clearly defined [9]. Bringing thus these contexts together in Facebook is not messy (as Helen says) — there are just many there where there [11].

Al l o f us  ha ve  a

III. DATA AND METHODS

For the purposes of this study, I draw on findings from a larger discourse-centred online ethnographic project on the construction of identities on Facebook, conducted during 2010-2013 [12]. Discourse-centred online ethnography [1] combines the systematic, longitudinal and repeated observation of online discourse (Facebook profiles here) with direct engagement (face-to-face and/or mediated) with the producers of this online discourse (Facebook profile owners here) and is complementary to the textual analysis of online data. My participants were recruited via convenience sampling (i.e. they were friends of friends). Initially, they were sent a message in which I explained the purposes of my study asking them to fill in an online questionnaire, which helped me to formulate an idea on how they experience the mechanics of social media. Following this, they were invited to have their Facebook profiles painstakingly observed and to participate in a series of semi-structured online interviews via email, instant messaging and/or Facebook messages. My dataset included Facebook profile information, status updates, comments, video and article links, photos my informants have taken themselves or have found elsewhere in the internet, interview excerpts, field notes as well my informants’ comments on drafts of my analysis. My interviewees were asked to sign a consent form in which they were

strong bond with the places where we were born and grew up, where we live, or where we experience particular stirring moments. Humanist geographers see this bond as a starting point from which we can orient ourselves to the world [32]. By the same token, environmental psychologists duly acknowledge that ‘where we are’ is intimately related to ‘where we are’, arguing that identity is not only shaped by place, but we ourselves may also serve as contextual markers for shaping place identities [10] [34]. Reference [31] views place identity as consisting of cognitions about the physical world in which we are located. These cognitions represent an assortment of memories, conceptions, interpretations, ideas, attitudes, values, beliefs, social meanings, preferences and feelings about specific physical settings. Put it plainly, place identity refers to the ways in which we understand ourselves by attributing meanings to places. As such, it should not be understood as a separate part of identity related to place, since all aspects of identity often contain significant references to place or incorporate locations or trajectories as crucial constituents [5] [40].

For sociolinguists and discourse analysts, a place acquires its meanings by the ways it is represented, i.e. written, talked about, and photographed, as well as by the situated interactions that ‘take place’ within it [29] [37]. Language can form and transform our everyday experiences of ‘self-in-place’ [19] [39] so that places are constructed in ways that carry profound implications for who we are, who we can claim to be [10] or where we belong [36]. Through this spectrum, language should not be seen as a mere means to represent or describe external environments. It is also a symbolic resource through which constructions of place can do the rhetorical work of claiming an identity [30].

I

In this light, the matters that will be addressed in the present paper are the following: How do Facebook users refer to places? Where are these references tied up to places? What do they imply or infer about place identities in these references? The paper is organised as follows. After defining place, I briefly discuss its relation to identity as well as the role of language as a kind of glue that keeps together people and places. Next, I present my data and methods of analysis. The remainder of the paper investigates instances of locating the self textually and visually, geographically and socio-politically in a variety of posts and comments. I close by drawing both specific and general conclusions.

II. PLACE, IDENTITY, AND LANGUAGE

Place is not just a position in space; it is the location plus everything that occupies that location, i.e. tasks, practices, routines, everyday life, seen as an integrated and meaningful phenomenon [29] [32]. Places are classified into three basic types: personal and interpersonal, social, and geographical [41]. Personal and interpersonal places deal with where we are now (in the sense of where our bodies are now) as well as our interlocutors, in other words a space that organises our interaction, perspective and discourse. Social places, on the other hand, locate our activities in everyday life, at home, at work, and during leisure time, and hence are usually defined in terms of what people do in these places — many of which are institutional. Examples in this category comprise outdoor places, residential places, commercial places, commerce service places, community service places, government agencies, educational places, leisure places, and workplaces. Ultimately, the third kind of place, although called geographical, in essence embraces social, political and cultural dimensions. These places can be represented by their scope, range, size or level, and are progressively inclusive, for example: home, street, neighbourhood, city, state, province, country, region, continent, world, and so on.

French philosopher Gabriel Marcel (1889-1973) propounded the idea that individuals are not distinct from their place — they are that place [32]. All of us have a...
assured that their material would remain confidential and would be used for academic purposes solely. Concerning the use of third-party comments in the study, I either asked for their posters’ permission or asked my subjects to do so on my behalf. Throughout my dataset I have preserved pseudonymity for my informants and anonymity for other Facebook users.

The data I have selected to present and discuss in this paper come from two of my five in total informants, Helen and Carla. Table I offers a rough idea about their demographics.

TABLE I. PARTICIPANTS’ DEMOGRAPHICS

</tbody>
</table>

IV. PLACEMAKING ON FACEBOOK

I will now turn to examples in which these two users, other than exploiting Facebook affordances,16 localise their posts by making both direct and indirect references to particular places. The discussion will pivot around the following themes: verbal check-ins, representational locating of self, culinary experiences and placemaking, and socio-political aspects of places.

A. Verbal Check-ins

Users specify where they are, where they are heading towards or where they are departing from, namely where their bodies are, at the moment of writing the status update. With this type of contextual relevance of place, users organise their perspective and orient readers[41]. Fig. 2 offers a brief insight.

Fig. 2. Verbal check-in.

Here there is a reference to a social place, and particularly a commercial service place, a café, and a geographical place, the city of Budapest. Helen, however, is located at the café not only for the typical activity of drinking coffee but also for working. That the formulation of this place is littered with feelings of euphoria and optimism (in a good mood!) is not due to marking but to the fact that she is in her partner’s home city with him. Two things are observed in this status. First, Helen, beyond just defining where she is, she discloses how she feels while being in the specific place too. Second, Budapest triggers certain emotions in her ongoing activities, marking exams in this case.

Saying where you are going can be done in more inventive ways as shown in Fig. 3. Helen adopts an entextualising process [5] [22], namely she extracts an instance of culture (the song First We Take Manhattan, which includes the lyric ‘First we take Manhattan, then we take Berlin’) and relocates it in her discourse as ‘first we take Budapest’ (where she will meet her partner) and ‘and then we take Berlin’ (where she will head afterwards for a conference presentation) to adjust it to her own situation and give us a flavour of her itinerary.

Fig. 3. Entextualising a song to locate the self.

B. Representational Locating of Self

Though text is sufficient to give a location, it is not the only mode that is used on Facebook. Uploading profile pictures with landscapes and cityscapes in the background has specific resonance for identity claims as well. It serves as a performative exercise of identity and belonging, which documents and validates the subjects’ experience of being at particular places experiencing particular moments [27] [38]. Our own bodies give and give off their meanings because of where they are and what they do ‘in place’ [13] [35]. In this line of reasoning, this type of photographic posing constitutes a kind of placement action which indicates and locates the self [18]. The next examples will illustrate this point.

Carla in her professional profile is pictured surrounded by the sea of Havana, Cuba, in a medium long shot (Fig. 4) while Helen (Fig. 5) appears to enjoy the Hungarian countryside as a biker.

---

16 A discussion of how the users exploit specific Facebook affordances (e.g. automatic check in, mapping, liking pages) to indicate places falls outside the remit of this paper.
London. By leaving the lyric streets of photos and then creating, editing and sharing albums the place themselves. unfinished, it is as if Carla invites viewers to reconstruct emotionally because of her partner.

Several books of Cuban literature, whereas Helen is tied Carla is tied to Cuba professionally, as she has translated to Hungary from a technical perspective she is highly competent in taking photographs with a deep aesthetic appreciation of what is characteristic of a place.

C. Culinary Experiences and Placemaking
Social media, and principally Facebook, Flickr and Instagram, have played an instrumental role in the explosion of interest in food, and food photography more specifically [33]. Apart from a biological need, food is robustly interlaced with place within the geographic imagination and has become central to our lived worlds and thereby our sense of identity [3] [21]. ‘Foods do not simply come from places, organically growing out of them, but also make places as symbolic constructs, being deployed in the discursive construction of various imaginative geographies’ [7]. Building upon this argument, place can be viewed as both signifier and signified, namely as ‘a site at which food consumption may take place’ as well as ‘a contingent and potentially contested set of meanings that may themselves be consumed through those practices associated with food’ [23]. To explicate these points, I will provide three examples: the first relates to local cuisine, as an inextricable part of people’s collective national consciousness; the second pertains to culinary tourism, as an opportunity to ‘taste’ the Other [28]; and the third is concerned with food as a displaced symbol of home.

Fig. 6 is a photo that Helen shot and then posted on her Timeline. It depicts a traditional Greek dish she made herself, called gemista (stuffed vegetables). The comments, in Fig. 7, produced by some of her international friends (I have indicated their nationality for ease of reference) underneath the picture set in motion a robustly interlaced with place within the geographic imagination and has become central to our lived worlds and thereby our sense of identity [3] [21]. ‘Foods do not simply come from places, organically growing out of them, but also make places as symbolic constructs, being deployed in the discursive construction of various imaginative geographies’ [7]. Building upon this argument, place can be viewed as both signifier and signified, namely as ‘a site at which food consumption may take place’ as well as ‘a contingent and potentially contested set of meanings that may themselves be consumed through those practices associated with food’ [23]. To explicate these points, I will provide three examples: the first relates to local cuisine, as an inextricable part of people’s collective national consciousness; the second pertains to culinary tourism, as an opportunity to ‘taste’ the Other [28]; and the third is concerned with food as a displaced symbol of home.

What is worth discussing here is the evocation of the inclusive ‘we’ via which the Iranian friend (comments 4 and 6) and the Greek friend (comment 5) speak for the culinary traditions of their countries seeing food standing in a metonymic relationship for their whole nations, the Iranian and the Greek respectively. Helen, on the other hand, deploys a different kind of ‘we’ in comment 7. Taking into account that all of the participants in this thread have been or are still UK residents, this ‘we’ comprises all those who come from different cultural and culinary backgrounds than the UK and find it difficult to prepare their local dishes there because the ingredients differ in taste (comment 7) or good ones are scarce to find (comments 11 and 13), constructing thus the UK as a rather hostile place for gastronomy. In this fashion, Helen disidentifies herself with the UK.

The foregoing example is indicative of what makes Facebook so special as a site for place identities. The mere uploading of a local food photo and the accompanying comments provide a sense of continuity to Helen’s past (comment 14: I used to buy stuff from Booths ages ago, when I lived in Hala4), present (comment 15: For now, I’m OK with fresh Greek vegetables:-)) and future place selves and actions (comment 11: will do that next time I’m in Lancaster, thanks!; comment 15: Next time I’ll try the market/single step and see how that goes).

Having touched upon tourism in the previous section, I will now move on to discuss culinary experiences as a form of tourist practice. Culinary tourism has been described as the intersection between food and travel, and refers to the practice of exploratory eating as a way to encounter, know, and consume other places and cultures, experiencing thus new ways of being [24] [28]. In this light, food functions as a transportable symbol of place, a moveable sign of Otherness [28]. In Fig. 8, included in an album with photos from Katowice and Krakow in Poland, Helen is holding – as if she is serving the viewer – a Zapiekanka, a popular type of Polish street food. Having a photo album under the name of the place and including food pictures of this place, Helen recirculates an imagined geography that differentiates places on the basis of their cuisines [28]. In the caption of the photo, she writes: Zapiekanka...miam!!! (Zapiekanka yummy!!!). But she is not only eating Zapiekanka – she is also eating ‘the differences mobilities make’ [28]. What Helen exhibits here is openness and desire to consume difference as well as competence in the other culture. By posting this photo on Facebook, she almost literally puts on display these qualities of hers.

Fig. 7. Interaction underneath gemista photo.

Fig. 8. Polish Zapiekanka.

Foods should not only be viewed as placed cultural artefacts, but as displaced materials and practices as well, which can inhabit many places [7]. Consider Fig. 9. While being in the UK (one can see the British buildings in the background, emphasising the out-of-placeness), Helen noticed and shot a tin of Greek olives used as plant pot (the tin reads: εκλεκτές ελιές εξαιρετικής ποιότητος – selected olives superior quality). For Helen, the Greekness of the olives, as

4 Hala is a Lancaster area. Single Step is a local wholefood co-op in Lancaster.
represented in their packaging, is no longer ordinary and mundane because it is embedded into another, fresh context and therefore stands out, deserving to be captured and shared as a symbol of home. In this example, Helen manifests a dual kind of geographical knowledge [7]: first, knowledge of the origins of the olives; and second, knowledge of the meanings of place, and regional identity, evoked amongst her Facebook audience who will look at this photo (and perhaps smile), especially the Greek members.

D. Socio-political Aspects of Places

Physical environments are necessarily social environments [17]. Economic, political, and social upheavals such as unemployment, governmental instability, intergroup conflicts, and other sources of frustration can have a corrosive effect upon one’s place identity [31]. The following examples tackle this matter with regard to the Greek crisis.

I. Protesting and documenting

Harking back to Helen’s interview in the introduction, she says about the demonstrations in Athens that ‘I was here and I participated in what was happening’. Indeed, she was an active and conscious citizen both physically and digitally. For instance, in heading to Athens Syntagma Square to protest against austerity together with the Greek Indignant Citizens (Aganaktismeni) in June 2011, she wrote on Facebook: ‘off to syntagma’. Such a status update should not be viewed as a mere check-in but as a discursive practice embedded in a broader socio-political and historical context.

The same goes for the uploading of photographs she had taken herself of the places where events related to the protests took place. In Fig. 10, we see Syntagma Square, outside the Greek parliament, while Fig. 11 is shot outside Marfin Bank in Stadiou Street, Athens, where three employees died during the nation-wide strike on 5 May 2010. Fig. 12 is an instance of transgressive semiotics, namely when a sign violates either intentionally or accidentally the conventional semiotics at that place [35]. The photo depicts an empty Athenian store, probably one of the hundreds that have closed down on account of the crisis, with two labels on its window, ΠΩΛΕΙΤΑΙ (for sale) and ΕΝΟΙΚΙΑΖΕΤΑΙ (to rent), and underneath them a poster that promotes tourism in Greece. At any moment in time these three signs would compose a transgressive semiotic system. Nonetheless, because of the socio-political situation in Greece, this triptych functions on a symbolic level: Greece (the land, its people) is available for sale to or to be rented by its creditors. In Fig. 13, which reads ΜΕΝΟΥΜΕ ΣΥΝΤΑΓΜΑ (We stay at Syntagma), the place, Syntagma Square, is represented as a symbol of resistance placed within the same contextual conditions as in the ‘off to syntagma’ status above.

By recording the place in crisis, Helen simultaneously represents her place in it. Since she is the one taking the images, which are powerful tokens of citizen journalism, and not posing in front of the camera, her representational locating of self is implied [18]. Her identity claim is ‘I’m there, at the heart of the events, protesting and documenting’.

Fig. 9. Greek olives tin in the UK.

Fig. 10. Syntagma Square (posted on 30 May 2011).

Fig. 11. Stadiou Street (posted on 6 May 2010).

Fig. 12. Empty store in Athens (posted on 23 October 2011).
In the next two examples, without mentioning any place names at all, Helen renounces her identification with Greece:

- have stayed too long in this country... (status posted on 25 May 2012 at 20:22 and liked by 2 people)
- surrealand (status posted on 16 June 2012 at 12:43)

The frustration-littered update in the first example is unpacked if we take into account that it was posted just after the May 2012 elections in Greece and the failure of political parties to form a new government as none of them had won an absolute majority of parliamentary seats. While in the interview excerpt in the beginning of the paper Helen deployed the spatial adverb ‘here’ to designate Greece, in this status update she displaces and distances herself by selecting the demonstrative ‘this country’ which in this context has a pejorative nuance seen as attitudinal dissociation and depersonalisation from the place. Her estrangement from Greece is even more accentuated by choosing English as the language of her status.

One day before the new elections, on 16 June 2012, Helen’s status included just one coined word: ‘surrealand’. Her Greek contacts as well as those who keep in touch with the proceedings in Greece can easily deduce that the surrealand is Greece. The coined term bears the connotations of absence of rationality, co-ordination and planning in the country which Helen implicitly condemns.

V. CONCLUDING REMARKS

We are the product of the routes we have traversed [15]. In this networked era, Facebook could very well be seen as a versatile inventory of our routes as those are inscribed in check-ins, updates, and photographs. Along these lines, the argument that web and mobile technologies utterly disconnect us from physical spaces is emasculated [14].

What the analysis brought to the fore is that place identity can have several components and overlapping layers, be that geographical, social, political, cultural, emotional. With Facebook, users can bring together these components and layers from virtually anywhere. The findings provide valuable insights into the nature of place identity as unfurled in Facebook. To commence with, place identity is different for different users. For Helen especially, place seems to be at the core of her identity. The following extract is from our interview after my initial observation of her Facebook activity.

Mariza: what has struck me most is your place identity
Helen: well, indeed. now you’re saying it…
I knew it to a certain degree, but it impresses me that it comes across so strongly to someone else

Not only does it come across so strongly, to borrow Helen’s words, but also we witnessed how references to places in her posts endowed her with a sense of continuity to her identity.

Moreover, users identify with different scales or types of places [20] from micro (e.g. a café) to macro (e.g. Budapest) and from specific (e.g. Syntagma Square) to general (e.g. Hungarian countryside). The analysis also suggested that place identity differs with respect to our role in given places. It is one thing to be a traveller in Cuba (Carla) and another to be a protester in Syntagma (Helen). Another important finding is that place identity is associated with different representations of personal meanings (e.g. marking at a café in Budapest) as well as socio-political meanings (e.g. Greece as surrealand). Furthermore, it is associated with different types of discursive means (e.g. place naming, inclusive we, distancing deixis, metonymy, insinuation, intertextual links, artistic photography, protest photography, food photography).

Place identity on Facebook is found to have two intrinsic values. First, it is fluid, often divorced from where the body is physically located. Strictly speaking, the body is situated together with a portable device and posts on Facebook. As shown, however, Helen is in
England but thinks and posts about the demonstrations in Athens.

Second, place identity is an essentially interactive, collaborative task, constructed through processes of negotiation between the profile owner and his/her Facebook audience. Participants work together on place identities, picking up certain aspects and playing Facebook audience. Participants work together on negotiation between the profile owner and his/her in Athens.

It is through their comments to posts that different facets of the hybridity of place identity are brought out, functioning as complementary parts of the profile owner’s asserted identity.

As emerged from the data at hand, the users do not just communicate about place, but most importantly they communicate through place, that is to say, by means of the place they communicate ‘something about themselves that goes beyond the descriptive characteristics of a place’ [16]. For instance, they assert or eschew belonging, they communicate openness and respect to other cultures, they use different languages as a mark of affiliation with (or disaffiliation from) certain places, they make political statements, they disidentify with the stressful aspects of a place, and they raise awareness about local and national issues.
